

ECT INTRODUCES:

MYTERMINAL, FOR YOU AND YOUR BUSINESS

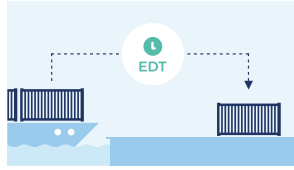

Do you rely on terminal data? And has the deepsea terminal always been a black box to you? Hutchison Ports ECT Rotterdam opens this black box by introducing MyTerminal. This digital platform gives you 24/7 **status information** about your containers and deepsea vessels at the ECT Delta and ECT Euromax terminal. Unique is the forecasted **discharge time** of every import container. This real data in **real-time** gives you the necessary information to plan more efficiently.

WHAT DOES MYTERMINAL OFFER?

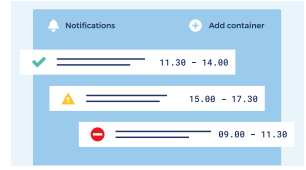

Real-time Container and Object status

The status of your containers at our terminals is automatically updated in real-time. You know exactly where your containers are along the terminal process so you can align your planning accordingly. Also status information about visiting deepsea vessels is real-time available.

Estimated Discharge Time (EDT)

For every import container a forecasted discharge window is provided. The EDT is automatically updated based on the latest quay crane planning and performance data. With MyTerminal you know exactly when your containers are ready for pick-up.

All insights in one overview

Get all relevant information in one overview and share with your colleagues. MyTerminal has many user friendly features to make your work easier and more efficient, such as personalised labels and notification settings for updates on container and object status.

More services to follow in the coming months

WHAT ARE YOUR BENEFITS?

✓ *Higher reliability*

✓ *Higher efficiency*

✓ *Satisfied customers*

✓ *Quicker insights*
